Summary

Graduating Software Engineering student specializing in highly secure full-stack web and mobile applications. Driven to learn, build, and innovate, actively seeking internship and junior developer roles to gain real-world experience and leverage cross-functional skills in AI, backend infrastructure, and interactive frontend development.

Technical Skills

Frontend: React, Next.js, HTML/CSS, JavaFX, Flutter.
Backend: Node.js, Python, Java, C/C++, REST APIs, Socket.IO.
Infrastructure & DB: PostgreSQL, MongoDB, Neon, Supabase, Firebase, Oracle, Docker, Vercel, Git.
Security, AI & Tools: Openrouter & Coding Harness (Opencode, Pi, Hermes, e.t.c), MATLAB, Solidworks.

Education & Certifications

RMIT University Oct. 2024 – Sep. 2028
Bachelor of Software Engineering (Honours) — GPA: 3.3/4.0 *Ho Chi Minh City, Vietnam*

- **Awards:** First Place Award (1st / 100+ Teams) in RMIT HACK-A-VENTURE 2025 - January 2026.
- **Certifications:** IELTS Band 7.5 (Reading: 9, Listening: 8.5, Writing: 7, Speaking: 6) - August 2023; CSWA Certificate (Certified SOLIDWORKS Associate) - June 2025; Big-O Coding Blue: Algorithms & Interview Patterns - May 2026.

Lê Quý Đôn High School Sep. 2021 – May 2024
English Specialized Class — Average Mark: 8.4 *Nha Trang City, Vietnam*

- **Awards:** Second Place Award in Khanh Hoa's High School English Provincial Competition - December 2023.

Projects & Experience

Flowguard (Flood Monitoring System) | *Project Planner & Prototype Designer* View Repository

- Architected a flood alert MVP in 24 hours for RMIT Hack-A-Venture, winning 1st place out of 100+ teams.
- Fused mock IoT sensor feeds, OpenWeather API, and tidal inputs into an end-to-end pipeline with sub-45s latency.
- Utilized an AI coding tool to complete the deployment of the data pipeline in under 24 hours, heavily optimizing infrastructure setup time.

Event Manager (Event Management System) | *Team Leader, Frontend, Backend & DB Developer* View Repository

- Developed a full-featured Event Management System with a graphical user interface and a relational database backend using Java, JavaFX, and PostgreSQL.
- Designed complete database schema, configured PostgreSQL/JDBC, managed Maven builds, and generated standalone executable JARs.

TicTacToang (Online Gomoku Website) | *Frontend Developer* View Repository

- Developed a Gomoku Webpage with single-player, local multiplayer, and online multiplayer with game customization, profile, match history, and game replay.
- Contributed to a 5-person Scrum team to ship the webpage for 50+ concurrent players, implementing dynamic mobile UI/UX for admin, guest, and player pages.

Smart Path Finder (Pathfinding Simulation) | *Leader, Graph Generation & Path Finding* View Repository

- Engineered a dual-optimization pathfinding system on a perfect square graph that computes both shortest-distance and fastest-time routes using Dijkstra's algorithm.
- Simulated real-world accumulated hourly traffic variations to model realistic navigation paths.

TutorBot (Front-end Tutor Assistant Website) | *Frontend Developer* View Repository

- Built an AI-powered active learning assistant helping students capture, analyze, and master their coursework.

NCT Flappy Bird Classic | *Graphic Designer & Game Developer* View Repository

- Modified the classic Flappy Bird game by integrating MediaPipe to detect arm-motion for bird movement.

Languages

Vietnamese: Native — **English:** Fluent (IELTS Band 7.5).
